The invitation extended to Dr Graf by the United States Geological Survey to prepare the chapter on sedimentary carbonates for their revision of F. W. Clarke's *Data of Geochemistry* has afforded a valuable opportunity for the state and federal geological surveys to cooperate in a basic review of selected topics in carbonate geochemistry. The resultant material is presented in five Illinois State Geological Survey Circulars and subsequently will serve as the basis for a condensed treatment in the revised *Data of Geochemistry*. Carbonates Richard J. Reeder, 2018-12-17 Volume 11 of *Reviews in Mineralogy* attempts to synthesize our present understanding of certain aspects of the mineralogy and chemistry of the rock-forming carbonates. This review follows by ten years a major assessment of sedimentary carbonate minerals by Lippmann (1973). There is only minor overlap of subject material and I hope that this difference reflects fairly how this field has developed. In this volume, some of the papers are general, i.e. those addressing crystal chemistry and phase relations, and they provide overviews of a fundamental nature and are of interest to many. Others are more specialized in coverage and generally reflect the different approaches used in carbonate geochemistry. The final chapter introduces transmission electron microscopy, a relatively new and powerful technique for mineralogical research that has great potential in carbonate research.

Carbonate Sedimentology Maurice E. Tucker, V. Paul Wright, 2009-07-17 Carbonate rocks, limestones, and dolomites constitute a major part of the geological column and contain not only 60% of the world's known hydrocarbons but also host extensive mineral deposits. This book represents the first major review of carbonate sedimentology since the mid-1970s. It is aimed at the advanced undergraduate/postgraduate level and will also be of major interest to geologists working in the oil industry. *Carbonate Sedimentology* is designed to take the reader from the basic aspects of limestone recognition and classification through to an appreciation of the most recent

developments such as large scale facies modelling and isotope geochemistry. Novel aspects of the book include a detailed review of carbonate mineralogy in non-marine carbonate depositional environments and an in-depth look at carbonate deposition and diagenesis through geologic time. In addition, the reviews of individual depositional systems stress a process-based approach rather than one centered on simple comparative sedimentology. The unique quality of this book is that it contains integrated reviews of carbonate sedimentology and diagenesis within one volume.
