Economic Geography Trevor J. Barnes, Brett Christophers, 2018-01-09 This volume in the celebrated *Critical Introductions to Geography* series introduces readers to the vibrant discipline of economic geography. The authors provide an original definition of the discipline and they make a strong case for its vital importance in understanding the dynamic interconnections, movements and emerging trends shaping our globalized world. *Economic Geography* addresses the key theories and methods that form the basis of the discipline and describes its communities of practice and relations to related fields including economics and sociology. Numerous illustrative examples explore how economic geographers examine the world and how and why the discipline takes the forms it does, demonstrating the critical value of economic geography to making sense of globalization, uneven development, money and finance, urbanization, environmental change and industrial and technological transformation. Engaging and thought provoking. *Economic Geography: A Critical Introduction* is the ideal resource for students studying across a range of subject areas as well as the general reader with an interest in world affairs and economics. *An Introduction to Geographical Economics* Steven Brakman, Harry Garretsen, Charles van

Commendatore, Saime Kayam, Ingrid Kubin, 2016-10-06 The uneven geographical distribution of economic activities is a huge challenge worldwide and also for the European Union In Krugman's *New Economic Geography* economic systems have a simple spatial structure This book shows that more sophisticated models should visualise the EU as an evolving trade network with a specific topology and different aggregation levels At the highest level economic geography models give a bird eye's view of spatial dynamics At a medium level institutions shape the economy and the structure of financial and labour markets At the lowest level individual decisions interact with the economic social and institutional environment the focus is on firms' decision on location and innovation Such multilevel models exhibit complex dynamic patterns path dependence cumulative causation hysteresis on a network structure and specific analytic tools are necessary for studying strategic interaction heterogeneity and nonlinearities
