*Beyond Mechanism* Brian G. Henning, Adam Scarfe, 2013-02 It has been said that new discoveries and developments in the human social and natural sciences hang in the air Bowler 1983 2008 prior to their consummation While neo Darwinist biology has been powerfully served by its mechanistic metaphysic and a reductionist methodology in which living organisms are considered machines many of the chapters in this volume place this paradigm into question Pairing scientists and philosophers together this volume explores what might be termed the New Frontiers of biology namely contemporary areas of research that appear to call an updating a supplementation or a relaxation of some of the main tenets of the Modern Synthesis Such areas of investigation include Emergence Theory Systems Biology Biosemiotics Homeostasis Symbiogenesis Niche Construction the Theory of Organic Selection also known as the Baldwin Effect Self Organization and Teleodynamics as well as Epigenetics Most of the chapters in this book offer critical reflections on the neo Darwinist outlook and work to promote a novel synthesis that is open to a greater degree of inclusivity as well as to a more holistic orientation in the biological sciences

Ancestors in Evolutionary Biology Ronald A. Jenner, 2022-07-28 Phylogenetics emerged in the second half of the nineteenth century as a speculative storytelling discipline dedicated to providing narrative explanations for the evolution of taxa and their traits It coincided with lineage thinking a process that mentally traces character evolution along lineages of hypothetical ancestors *Ancestors in Evolutionary Biology* traces the history of narrative phylogenetics and lineage thinking to the present day drawing on perspectives from the history of science philosophy of science and contemporary scientific debates It shows how the power of phylogenetic hypotheses to explain evolution resides in the precursor traits of hypothetical ancestors This book provides a comprehensive exploration of the topic of ancestors which is central to modern biology and is therefore of interest to graduate students researchers and academics in evolutionary biology palaeontology philosophy of science and the history of science

*Essential Readings in Biosemiotics* Donald Favareau, 2010-06-10 Synthesizing the findings from a wide range of disciplines from biology and anthropology to philosophy and linguistics the emerging field of Biosemiotics explores the highly complex phenomenon of sign processing in living systems Seeking to advance a naturalistic understanding of the evolution and development of sign dependent life processes contemporary biosemiotic theory offers important new conceptual tools for the scientific understanding of mind and meaning for the development of artificial intelligence and for the ongoing research into the rich diversity of non verbal human animal and biological communication processes Donald Favareau s *Essential Readings in Biosemiotics* has been designed as a single source overview of the major works informing this new interdiscipline and provides scholarly historical and analytical commentary on each of the texts presented The first of its kind this book constitutes a valuable resource to both bioscientists and to semioticians interested in this emerging new discipline and can function as a primary textbook for students in biosemiotics as well Moreover because of its inherently interdisciplinary nature and its focus on the big questions of

cognition meaning and evolutionary biology this volume should be of interest to anyone working in the fields of cognitive science theoretical biology philosophy of mind evolutionary psychology communication studies or the history and philosophy of science    Evolution After Darwin ,1969    **The Origin and Evolution of Life on Earth** David W.
