Notions of Physics in Natural Philosophy George Vlahakis, 2021-02-19 The European Physical Society Conference Notions of Physics in Natural Philosophy was held in 23-25 September 2007 in Athens. It was organized by the Program of History and Philosophy of Science of the Institute for Neohellenic Research, National Hellenic Research Foundation and the Laboratory of Science Education, Epistemology and Educational Technology of the University of Athens. The Conference was supported by the History of Physics Committee of the European Physical Society and the History of Physics Group of Institute of Physics, England. The latter was represented by Mr Malcolm Cooper, editor of the Newsletter of the Group, who kindly gave as a brief description of the activities of the Group. The main themes of the Conference were: The emergence of notions of physics in ancient philosophy; The concept of physical laws in Philosophy of Nature during the Middle Ages and the Renaissance; The mathematization of Natural Philosophy and the emergence of classical sciences. We hope that the present volume of the Proceedings will be a useful tool for those interested on the subject.

Magique quantique Tim James, 2024-01-10 Au début du XXe siècle la science semblait complète et les lois de la nature presque toutes découvertes mais des chercheurs intrépides ont travaillé en gardant endormi en découvrant la mécanique quantique. Dans le monde quantique les objets peuvent se trouver en deux endroits à la fois, le voyage dans le temps est non seulement possible mais nécessaire, la cause et l'effet peuvent s'inverser et la simple observation d'un objet change son état. Des univers parallèles l'antimatière laissez-vous guider par les faits.

Tim James la découverte des bizarreries du monde de l'infiniment petit.

Negative Knowledge Sebastian Hüscher, Isabelle Koch, Philipp Thomas, 2020-08-10 The advent of Modernity was accompanied by a radical criticism of traditional metaphysics. In particular since the 20th century rationality is predominantly conceived of as positivistic and scientific, reducing reality to what is positively knowable. The price to pay is the cutting out of any kind of phenomenon of negativity. The present volume explicitly explores the philosophical and epistemological potential of negativity. The contributions brought together in this book tackle the question of negativity from historical as well as from systematical perspectives. From different angles they defend the claim that philosophical approaches recurring to negativity can build a non-reductive conceptualization of rationality and thus offer a valuable contribution to the orientation of humankind in the 20th and 21st century. This volume contains contributions in English, French and German.
