Functional Equations in Several Variables J. Aczél, J. Dhombres, 1989 This treatise deals with modern theory of functional equations in several variables and their applications to mathematics information theory and the natural behavioural and social sciences The authors have chosen to emphasize applications though not at the expense of theory so they have kept the prerequisites to a minimum

Spaces Manfred Knebusch, 1989-02-22 The book is the second part of an intended three volume treatise on semialgebraic topology over an arbitrary real closed field R . In the first volume LNM 1173 the category $LSA\ R$ or regular paracompact locally semialgebraic spaces over R was studied. The category $WSA\ R$ of weakly semialgebraic spaces over R the focus of this new volume contains $LSA\ R$ as a full subcategory. The book provides ample evidence that $WSA\ R$ is the right cadre to understand homotopy and homology of semialgebraic sets while $LSA\ R$ seems to be more natural and beautiful from a geometric angle. The semialgebraic sets appear in $LSA\ R$ and $WSA\ R$ as the full subcategory $SA\ R$ of affine semialgebraic spaces. The theory is new although it borrows from algebraic topology. A highlight is the proof that every generalized topological cohomology theory has a counterpart in $WSA\ R$ with in some sense the same or even better properties as the topological theory. Thus we may speak of ordinary singular homology groups, orthogonal, unitary or symplectic K groups and various sorts of cobordism groups of a semialgebraic set over R . If R is not archimedean then it seems difficult to develop a satisfactory theory of these groups within the category of semialgebraic sets over R . With weakly semialgebraic spaces this becomes easy. It remains for us to interpret the elements of these groups in geometric terms. This is done here for ordinary cohomology. **Berichte der Mathematisch-Statistischen Sektion in der Forschungsgesellschaft Joanneum**, 1987
