

INSIDE OUR EARTH

Inside Our Earth

The Earth is made up of several layers one inside the other, just like an onion. Following are the main layers of the Earth:

Crust :

- The crust is the uppermost layer found on the surface of the Earth.
- It is the thinnest of all the layers and is about 35 km on the continental masses and only about 5 km on the ocean floor.
- Two main mineral constituents of the continental mass are silica and alumina. Therefore, continental crust is also called **sial**.
- The oceanic crust consists mainly of silica and alumina. Therefore, it is known as **sima**.

The interior structure of the Earth

Mantle :

- This layer of the Earth lies underneath the crust.
- It extends up to a depth of 2,900 km below the Earth's crust.

Core :

- It is innermost layer of the Earth with a radius of about 3500 km.
- It is called nife as it is made up of nickel and iron (ni-nickle; fe-ferrous or iron).
- There is very high temperature and pressure inside the Earth's core.

Rocks and Minerals

The crust of the Earth is made up of many rocks. The crust of the Earth is composed of solid natural mass called the rock. Rocks vary in shape, size and colour. There are mainly three types of rocks such as:

Igneous Rocks :

- The word igneous is derived from the Latin word which means 'fire'.
- When hot molten magma (lava) cools down, it becomes solid. Such rocks are known as igneous rocks. They are also called primary rocks.
