## **Global Health Statistics:**

**World Health Statistics 2016 [OP]** World Health Organization, 2016-06-08 The World Health Statistics series is WHO's annual compilation of health statistics for its 194 Member States. The World Health Statistics 2016 focuses on the health and health-related Sustainable Development Goals (SDGs) and associated targets. It represents an initial effort to bring together available data on SDG health and health-related indicators, providing an assessment of the situation in 2016. The SDG health goal to ensure healthy lives and promote well-being for all at all ages includes 13 targets covering all major health priorities and including the unfinished and expanded Millennium Development Goals (MDGs) agenda four targets to address noncommunicable diseases (NCDs), mental health, injuries, and environmental issues, and four means of implementation targets. This report also seeks to demonstrate the critical linkages between health and other SDGs by including indicators of selected health determinants and risk factors in other SDG targets. The series is produced by the WHO Department of Information Evidence and Research of the Health Systems and Innovation Cluster. As in previous years, World Health Statistics 2016 has been compiled using publications and databases produced and maintained by WHO technical programs and regional offices. WHO presents World Health Statistics 2016 as an integral part of its ongoing efforts to provide enhanced access to comparable high-quality statistics on core measures of population health and national health systems. Unless otherwise stated, all estimates have been cleared following consultation with Member States and are published here as official WHO figures.

**Global Health** Kevin McCracken, David R. Phillips, 2012-07-26 The health of human populations around the world is constantly changing, and the health profiles of most nations in the early twenty-first century global health landscape are unrecognizable compared with those of just a century ago. This book examines and explains these health changes and considers likely future patterns and changes. While the overall picture charted is one of progress and improvement, certain unfortunate regressions and stubbornly persistent health inequalities are equally shown to be part of the evolving patterns of global health. The chapters of the book are organized in three major parts. The first part introduces readers to the principal concepts of global health and to the idea of populations having distinctive health profiles. In particular, it explores how those profiles can be measured and how they change using the umbrella concepts and theories of epidemiological and health transition. Building on the first section, the second part focuses on the evolution of health states as well as paying particular attention to the reasons for the many subnational inequalities in global health. It also examines health challenges such as the continuing infectious disease burden and current emerging epidemics. The final part transports readers from the current health scene to future possible and probable health scenarios, acknowledging the challenges presented by global environmental change as well as issues centered around geopolitics and human security. Using clear and original explanations of complex issues, this text makes extensive use of boxed case studies and international examples with thought-provoking discussion questions posed for readers at the end of each chapter. Global Health is essential reading for students of global
