*Fiberglass Reinforced Plastics* Nicholas P. Cheremisinoff, Paul N. Cheremisinoff, 1995-12-31 This book has been prepared as a reference on manufacturing techniques and applications of fiberglass reinforced plastics It provides discussion of properties concepts and is written for the potential user to summarize advantages in usage The book contains nine chapters of discussion of relationships between polymers reinforcements and uses as well as a useful glossary of plastics and engineering terms There is a wide interest in fiberglass reinforced plastics due to useful properties which meet a great many product and use requirements as well as the relative ease with which such products can be fabricated Fiberglass reinforced plastics find applications in transportation marine construction electronics recreation aircraft aerospace and numerous manufacturing industries These plastics have virtually displaced wood in the marine industry and applications replacing metals in other areas continue to grow The user of this book will find practical and useful information for design engineering plant and maintenance Presented is the technology and applications to serve the varied interests of readers in diverse industries

*The Complete Technology Book on Fibre Glass, Optical Glass and Reinforced Plastics* NIIR Board of Consultants and Engineers, 2006-10-01 Although many natural materials were used in the past by man answering his instinctive urges to prevent heat loss from or entry into his dwellings no material in modern technology has satisfied the all around requirements as has fiber Glass Fiber glass optical glass and reinforced plastics have important applications and uses in the making of various products Fiberglass is a lightweight extremely strong and robust material Although strength properties are somewhat lower than carbon fiber and it is less stiff the material is typically far less brittle and the raw materials are much less expensive Its bulk strength and weight properties are also very favorable when compared to metals and it can be easily formed using molding processes Fibre glass behaves as a thermal insulation because of its entrapment of small cells of air and prevention of movement of the air in those cells In acoustical applications fibre glass presents to advancing sound waves a myriad of small anechoic chambers which reflect the sound inward from many diverse surfaces until it becomes blotted out Optical glass is a high glass material that has been seen specifically formulated to possess certain desirable characteristics that effect the propagation of light The two primary parameters that define the basic types of optical glass are its refractive index and its dispersion Transportation on wheel is of special significance to the reinforced plastics industry on a number of counts Suppliers of reinforced plastics parts are often called upon to furnish prototypes of products being considered for auto truck and bus applications Performance and quality demands on materials used in aerospace vehicles have given rise to many plastics developments and have kept profits in the plastics industry at a higher level than those in other major markets Some of the fundamentals of the book are fibres based on natural polymers fibres based on synthetic polymers fibre glass blown wool or insulation products and their applications fibre glass in wall construction for reduced sound transmission ceramic fibre papers ceramic fibre textiles commercial polymerization
