Harold Dwight Lasswell

Future Of Political Science:

The Future of Political Science Harold D. Lasswell, 2017-09-04 Harold D Lasswell is arguably the quintessential face of political science to the larger public of the past century However there is a side to Lasswell less well known but of special importance in this day and age the place of the profession of politics as an academic activity This book written at the start of the culture wars thirty years ago outlines the basic core position of political science practitioners It helps to explain why the field kept its collective cool when other social science professionals veered to more extreme activist positions The Future of Political Science grew out of the phenomenally rapid expansion of the study of government in the United States and elsewhere The study of professionalism among physical scientists lawyers engineers etc was not matched by such internal examination within the social sciences until much later Lasswell s overview centered on developments in the United States There unfettered study of government reached unprecedented heights in the final stage of the twentieth century The key concept of this volume one that continues to inform discourse is the relationship of political science as a mechanism for the study and teaching of the political system to the field as a tool of the Establishment This concern grew in the wake of a variety of scandals and secret support sponsored by both government and non government organizations alike The Future of Political Science covers areas ranging from membership size and disparities intervention scenarios in world events the nature of creativity in political research collaboration in projects with the other social sciences and the location of scientific centers of gravity in the study of politics Because of Lasswell s works we have a field of the political science of knowledge as well as the sociology of knowledge Harold D Lasswell served as Ford Foundation Professor of the Social Sciences at Yale University Distinguished Professor of Policy Sciences at Joh [The Future of Political Science](#) Gary King, Kay L. Simon, 1997-03 In this fourth edition Neal Riemer and Douglas W Simon again seek to

introduce students to the challenging discipline of political science by highlighting six cardinal features. The editors strongly believe that their unique and comprehensive approach employing those six features can best equip students of political science to stay abreast of the ever-changing and ever-challenging world of politics. First and most important, Riemer and Simon affirm the importance of addressing the three main concerns of political science: political and philosophy and ethics, empirical behavioral political science, and public policy. Second, the authors reaffirm their normative preference for politics as a civilizing enterprise, one that enables people in the political community to live better, to grow robustly in mind and spirit, and to find creative fulfillment. The fourth cardinal feature requires to recognize realistically the ever-changing nature of politics and the tasks of assessing and responding to changing values. The sixth cardinal feature of *The New World of Politics* is understanding the importance of keeping the future in mind, not only the immediate future but the long-range future. This book seeks to introduce students to political science as a discipline intimately involved with ethics, empirical social scientific inquiry, and public policy. Neal Riemer and Douglas W. Simon are endeavoring to help students respond to those future problems with understanding and wisdom. A Collegiate Press book.

Towards Rethinking Politics, Policy and Polity in the Anthropocene Hans Günter Brauch, 2025-02-24. Humankind faces two anthropogenic threats to its survival that are closely linked. The first is the end of the Holocene and the start of the Anthropocene, which was marked by the test of a nuclear bomb on 16 July 1945. In the prevailing peace and security narrative, nuclear weapons and the other country bloc or alliance pose a perceived threat to humankind's survival. In the Anthropocene narrative, we are the threat through our way of life and the burning of fossil fuels. The start of the Anthropocene coincides with a change in the international order with the setting up of the UN and the Bretton Woods Institutions. Three stages of this order are distinguished: the Cold War bipolarity, the post-Cold War era unipolarity, and the end of the rule-based global liberal order multipolarity on 24 February 2022. In this book, ten multidisciplinary perspectives discuss complexity, Anthropocene geopolitics, peace and security discourses, and the debate on the Anthropocene planetary boundaries, complex crises, and integrative geography in the Anthropocene governance and politics, and the Pleistocene and gender. Both existential threats for humankind are illustrated by cover photos of the first nuclear weapons test on 16 July 1945 and by Category 5 Hurricane
