Kerr Environmental Research Laboratory,1987 Handbook, Ground Water: Ground water and contamination ,1990 The Essential Handbook of Ground-Water Sampling David M. Nielsen,2017-08-25 Tremendous improvements in ground water sampling methodologies and analytical technologies have made it possible to collect and analyze truly representative samples to detect increasingly lower levels of contaminants now in the sub parts per billion range Though these new methods produce more accurate and precise data and are less expensive many companies and

government agencies are reluctant to update their sampling protocols and regulations claiming the transition would be too costly. The Essential Handbook of Ground Water Sampling clearly details the economic and scientific case for adopting these new methodologies. Citing examples of unnecessary expenditure due to the inaccuracy of out dated techniques, the editors point out that the expense of making incorrect decisions based on poor quality samples clearly negates any savings that might be realized by using older, more inefficient and effectively short sighted methods. Using numerous figures, tables and references to recent research, the editors explain the efficiency of utilizing newer, more accurate techniques that produce higher quality data. The text provides a detailed discussion of every aspect of ground water sampling, from the development of a sampling and analysis plan through sample collection, pre treatment, handling, shipping and analysis, to the documentation, interpretation and presentation of ground water quality data. Successful sampling events and accurate data provide a sound foundation for making important, potentially expensive decisions regarding site monitoring, risk assessment, remediation and closure. Armed with the information presented in this handbook, environmental professionals will be able to make sound technological and economic decisions regarding the choice of sampling equipment, methodologies and procedures to meet their site specific objectives and ensure the success of their ground water sampling programs.
