Presents hormones in groups according to their origin so that readers can easily understand their inter relation. Includes 47 new hormones such as neuropeptides, cytokines, growth hormones, biogenic amines and amino acids that are important for cell to cell communication via endocrine, paracrine and neurotransmitter signaling. Summarizes the current knowledge of hormone evolution based on comparative genome resources such as synteny, genome sequence and comprehensive phylogeny. Covers a wide range of information on hormones from basic information on structure and function across vertebrate and invertebrate phyla to clinical applications.
